Tropical rainforests lie in the equatorial zone, between the Tropic of Cancer and Tropic of Capricorn. Tropical rainforests are characterized by wet and humid climatic conditions, along with dense forest cover. These forests can be located in Australia, Asia, South America, Africa, Caribbean islands, Central America, and on several of the Pacific, Indian Ocean. Rainforests are considered to be one of the oldest and the most complex ecosystems on earth, which explains the presence of numerous species of animals found here. This unique primate can be located in the South American rainforest. Marmoset is probably the cutest primates of all time. There are 22 species of Marmoset existed in the world. The amazing fact from this creature is, they always gave birth of twins.
