§ 1,2. The sole mission of the physician is to cure rapidly, gently, permanently.

Note.—Not to construct theoretical systems, nor to attempt to explain phenomena

§ 3, 4. He must investigate what is to be cured in disease and know

18
what is curative in the various medicines, in order to be able to adapt the latter to the former, and must also understand how to preserve the health of human beings.

§ 5. Attention to exciting and fundamental causes and other circumstances, as helps to cure.

§ 6. For the physician, the disease consists only of the totality of its symptoms.

Note—The old school’s futile attempts to discover the essential nature disease (prima causa).

§ 7. Whilst paying attention to these circumstances (§ 5) the physician needs only to remove the totality of the symptoms in order to cure the disease.

Note 1—The cause that manifestly produces and maintains the disease should be removed.

Note 2—The symptomatic palliative mode of treatment directed towards a single symptom is to be rejected.

§ 8. If all the symptoms be eradicated, the disease is always cured internally also.

Note—This is stupidly denied by the old school.

§ 9. During health a spiritual power (autocracy, vital force) animates the organism and keeps it in harmonious order.

§ 10. Without this animating, spirit-like power the organism is dead.

§ 11. In disease, the vital force only is primarily morbidly deranged, and expresses its sufferings (the internal change) by abnormal sensations and functions of the organism.

Note—It is unnecessary for the cure to know the vital force produces the symptoms.

§ 12. By the disappearance of the totality of the symptoms by the cure, the affection of the vital force, that is to say, the whole internal and external morbid state is also removed.

§ 13. To regard those diseases that are not surgical as a peculiar distinct thing residing in the human frame it an absurdity which has rendered allopathy so pernicious.

§ 14. Everything of a morbid nature that is curable makes itself known to the physician by disease symptoms.

§ 15. The affection of the diseased vital force and the disease-symptoms thereby produced constitute an inseparable whole—they are one and the same.
§ 16. It is only by the spiritual influences of morbific noxae that our spirit-like vital force can become ill; and in like manner, only by the spirit-like (dynamic) operation of medicines that it can be again restored to health.

§ 17. The practitioner, therefore, only needs to take away the totality of the disease-signs, and he has removed the entire disease. Notes 1*2—Illustrative examples.'

§ 18. The totality of the symptoms is the only indication, the only guide to the selection of a remedy.

§ 19. The alteration of the state of the health in diseases (the disease-symptoms) cannot be cured by the medicines otherwise than in so far as the latter have the power of also producing alterations in man's health.

§ 20. This power of medicines to alter the state of the health can only be ascertained by their effects on (healthy) persons.

§ 21. The morbid symptoms that medicines produce in healthy individual are the only thing wherefrom we can learn their disease-curing power.

§ 22. If experience should show that by medicines that possess similar symptoms to the disease the latter would be most certainly and permanently cured, we must select for the cure medicines with similar symptoms; but should it show that the disease is most certainly and permanently cured by opposite medicinal symptoms, we must choose for the cure medicines with opposite symptoms.

Note—The employment of medicines whose symptoms have no actual (pathological) relation to the symptoms of the disease, but which act on the body in a different manner, is the allopathic method, which is to be rejected.

§ 23. By opposite medicinal symptoms (antipathic treatment) persisting disease symptoms are not cured.

§ 24, 25. The other remaining method of treatment, the homoeopathic, by means of medicines with similar symptoms, is the only one that experience shows to be always salutary.

§ 26. This is dependent on the therapeutic law of nature that a weaker dynamic affection in the living organism is permanently extinguished by one that is very similar to and strong than it, only differing from it in kind. Note—This applies both to physical affections and moral maladies.
§ 27. The curative power of medicines, therefore, depends on the
symptoms they have similar to the disease. **Note**—Illustrations of it.
§ 28, 29 Attempt to explain this therapeutic law of nature.
  **Note**—Illustrations of it.
§ 30, 33. The human body is much more disposed to let its state of
health be altered by medicinal forces than by natural disease.
§ 34, 35. The correctness of the homoeopathic therapeutic law is shown
in the want of success attending every unhomoeopathic
treatment of a long standing disease, and in this also, that
two natural diseases meeting together in the body, if they be
dissimilar to each other do not remove or cure on another.
§ 36. I. The older disease existing in the body, if it be equally as
strong or stronger, keeps away from the patient a new
dissimilar disease.
§ 37. Thus under unhomoeopathic treatment this is not violent,
chronic disease remain as they were.
§ 38. II. Or a new, stronger disease, attacking an individual already
ill, suppresses only, as long it lasts, the old disease that is
dissimilar to it, already present in the body, but never removes
it.
§ 39. It is just in this way that violent treatment with allopathic
drugs does not cure a chronic disease, but suppresses it only
as long as the action of the powerful medicines, which are
unable to excite any symptoms similar to the disease, lasts;
after that, the chronic disease makes its appearance as bad or
worse than before.
§ 40. III. Or the new disease, after having long acted on the body,
joins the old one that is dissimilar to it, and thence arises a
double (complex) disease; neither of these two dissimilar
diseases removes the other.
§ 41. Much more frequently than in the course of nature, an artificial
disease caused by the long-continued employment of
powerful, inappropriate (allopathic) medicine in ordinary
practice, associates itself with the old natural disease, which
is dissimilar to (and therefore not curable by) the former, and
the chronic patient now becomes doubly diseased.
§ 42. These diseases that thus complicate one another take, on
account of their dissimilarity, each the place in the organism
suited for it.
§ 43, 44. But quite otherwise it is on the accession of a stronger disease to a pre-existing one similar to it; in that case the latter will be removed and cured by the former.

§ 45. Explanation of this phenomenon.

§ 46. Instances of chronic disease being cured by the accidental accession of another similar but stronger disease.

§ 47—49. In cases where disease come together in the course of nature it is only one that displays similar symptoms that can remove and cure the other, a dissimilar disease can never do this; this should teach the physician what kind of medicines he can certainly cure with, namely, with homoeopathic ones alone.

§ 50. Nature has but few diseases to send to the homoeopathic relief of other diseases, and these its remedial agents are accompanied by many inconveniences.

§ 51. On the other hand, the physician has innumerable remedial agents, possessing great advantages over those.

§ 52. From what takes place in nature, the physician may learn never to treat diseases with other than homoeopathically selected, medicines, whereby he will be able to cure them, which he never could do with hetherogeneous (allopathic) remedies, that never cure, but only injure the patient.

§ 53, 54. There are but three possible modes of employing medicines against diseases.

1. The homoeopathic, which alone is efficacious;

§ 55. 2. The allopathic, or heteropathic

§ 56. 3. The antipathic (enantiopathic) or palliative.

Note—Remarks on isopathy, as it is termed.

§ 57. The method of treatment in which a remedy which displays an opposite action (contraria contrariis) is prescribed for a single symptom of the disease. Examples.

§ 58. This antipathic procedure is not defective merely because it is directed against a single symptom of the disease only, but also because in persisting ailments, after it produces a short apparent amelioration, real aggravation ensures. Note—Testimonies of authors to the truth of this.

§ 60. Increasing the does at every repetition of a palliative never cures a chronic affection, but does still more harm.

§ 61. Whence physicians ought to have inferred the utility of an
opposite and only good mode of treatment to wit, the homoeopathic.

§ 62. The reason of the injurious nature of the palliative, and of the sole efficacy of the homoeopathic employment of medicines.

§ 63. Depends upon the difference between the primary action that takes place under the influence of every medicine, and the reaction or secondary action subsequently effected by the living organism (the vital force).

§ 64. Explanation of the primary and secondary actions.

§ 65. Examples of both.

§ 66. From the smallest homoeopathic doses of medicine employed in treatment, the secondary action of the vital force merely shows itself in the restoration of the balance of health.

§ 67. These truths explain the salutary character of the homoeopathic treatment, as also the perversity of the antipathic (palliative) method.

Note—Cases in which the antipathic employment of medicines is alone admissible.

§ 68. How is the efficacy of the homoeopathic system proved by these truths?

§ 69. How is the hurtfulness of the antipathic treatment proved by these truths?

Note 1.—Opposite sensations do not neutralise each other in the human sensorium; they are not therefore like opposite substance in chemistry.

Note 2.—Illustrative example.

§ 70. Short summary of the homoeopathic system of medicine.

§ 71. The three points necessary for curing: (1) the investigation of the disease; (2) the investigation of the effects of the medicines; and (3) their appropriate employment.

§ 72. General survey of diseases—acute chronic.

§ 73. Acute disease that attack single individuals, sporadic, epidemic, acute miasms.

§ 74. The worst kinds of chronic diseases are those produced by the unskilfulness of allopathic physicians.

§ 75. These are the most incurable.

§ 76. It is only when the vital force is still sufficiently powerful, that the injury can then be repaired, often only after a long
§ 77. Diseases inappropriately named chronic.

§ 78. Chronic diseases proper; they will arise from chronic miasms.
§ 79. Syphilis and sycosis.
§ 80, 81 Psora; it is the mother of all true chronic disease except the syphilitic and sycotic.

Note—Names of disease in the ordinary pathology.
§ 82. Among the more specific remedies discovered for these chronic miasms, especially for psora, the selection of those for the cure of each individual case of chronic disease is to be conducted all the more carefully.
§ 83. Requisites for apprehending the picture of the disease.
§ 84-99. Instructions to the physician for investigating and tracing the picture of the disease.
§ 100-102. Investigation of the epidemic diseases in particular.
§ 103. In like manner must the fundamental cause of (non-syphilitic) chronic diseases be investigated and the great entire picture of psora be displayed.
§ 104. Utility of nothing down in writing the picture of the disease, for the purpose of curing, and the progress of the treatment. Note—How the old school physicians go about the investigation of the morbid state.
§ 105-114. Preliminaries to be attended to in investigating the pure effects of medicines on healthy individuals. Primary action, Secondary action.
§ 115. Alternating action of medicines.
§ 116, 117. Idiosyncrasies.
§ 118, 119. The action of every medicine differs from that of every other. Note—There can be no such, things as surrogates.
§ 120. Every medicine, therefore, must be carefully proved to ascertain the peculiarity of its special effects.

§ 121, 140. Mode of producing when we make trial of them on other persons.
§ 141. The experiments of the healthy physician with medicines upon himself are the best.
§ 142. ‘T - -, investigation of the pure effects of medicines in diseases is difficult.”
§ 143-145. Only from such investigations of the pure effects of medicines on healthy persons can a real materia medica be formed.

§ 146. The most appropriate therapeutic employment of medicines known in their pure effects. § 147. The medicine most homoeopathically corresponding is the most suitable, is the specific remedy.

§ 148. Explanation of how a homoeopathic cure is probably effected.

§ 149. The homoeopathic cure of a disease that has occurred quickly is quickly effected; that of chronic diseases, however, demands proportionally more time.

Note—Difference betwixt pure homoeopathists and the mongrel sect.

§ 150. Slight ailments.

§ 151. Important diseases have a number of symptoms.

§ 152. For those with numerous striking symptoms a homoeopathic remedy can be more certainly found.

§ 153. What kind of symptoms ought one chiefly to attend to in the choice of a remedy?

§ 154. A remedy as homoeopathic as it is possible to be cures without much disturbance.

§ 155. Case of freedom from disturbance of such cures.

§ 156. Cause of the slight exceptions of this.

§ 157-160. The medicinal disease very similar, but somewhat superior in strength, to the original disease, termed also homoeopathic aggravation.

§ 161. In chronic (psoric) diseases the homoeopathic aggravation from (antipsoric) homoeopathic medicines occur during a period of several days, from time to time.

§ 162-171. Rules for treatment when the supply of known medicines is too small to allow perfect homoeopathic remedy to be discovered.

§ 172-184. Rules for the treatment of diseases with too few symptoms; one-sided diseases

§ 185-203. Treatment of diseases with local symptoms; their external treatment is always injurious.

§ 204, 205. All chronic affections and disease properly so-called (that are not merely produced and maintained by a bad mode of living) must be cured only from within, by the homoeopathic medicines appropriate for the miasm that lies at their root.
§ 206. Preliminary investigation of miasm that lies at their root, of the simple miasm or is complications with a second (or even with a third). 

§ 207. Inquiry into the treatment previously employed.

§ 208, 209. The other preliminary inquiries necessary for the apprehension of the morbid picture of the chronic disease.

§ 210-230. Treatment of the so-called mental or emotional disease.

§ 231, 232. The intermittent and alternating diseases.

§ 233, 234. The periodical intermittent diseases.

§ 235-244. The intermittent fevers.

§ 245-251. Mode of using the remedies.

Note—Repetition of the doses

§ 252-256. Signs of commencing improvement.

§ 257, 258. False predilection for favourite remedies and unjustifiable aversion to other medicines.

§ 259-261. Regimen in chronic diseases.

Note—Injurious things in the habits of life.

§ 262-263. Diet in acute diseases.

§ 264-266. Selection of the most energetic, most genuine medicines.

Note - Change effected in some substances in their preparation for food.

§ 267. Preparation of the most powerful and most durable forms of medicines form plaints that can be obtained fresh.

§ 268. Dry vegetable substances.

Note - Preparation of powers so that they shall keep.

§ 269-271. The mode of preparing crude medicinal substances peculiar to homoeopathy, so as to develop their curative powers to the utmost.

§ 272-274. Only one, single, simple medicine should be given to the patient at one time.

§ 275-277. Strength of the doses for homoeopathic use—how it may be increased or diminished. Their dynamization.

§ 288, 292. What parts of the body are more or less susceptible to the influence of the medicines?

Note—Advantage of the olfaction of highly potentized medicines over every other method of taking them.

§ 293, 294. Animal magnetism (mesmerism). Its positive and negative employment.
CONTENTS

Hahnemann's preface to the sixth edition
(summarised version). 269

6. Sixth and Final Edition of Organon 271
   The physician's work 283

COMMENTARY ON ORGANON
(The Doctrinal Part, Sec. 1-70)

The highest ideal of cure 286
Knowledge of disease 288
Knowledge of medicine and medicinal powers 292
Knowledge of the therapeutic relation between
diseases and drugs 293
Knowledge about the choice of the remedy
- Its exact mode of preparation and proper dose 294
Knowledge of obstacles of the recovery in each
case and how to recover them 294
Knowledge of hygiene or health preservation 295
A true practitioner of the healing art should be
an unprejudiced observer 296
The general principles involved in the cure
of diseases 297
The conception of life and organism 300
Conception of health, disease and cure 304
What is curative in medicine? 308
The ways of ascertaining the action of drugs 309
Pros and cons of animal provings 310
Pros and cons of experiment on human beings 310
Drugs produces artificial diseases and best method
of employment of remedies for curative purposes 311
The Heteropathic or Allopathic method of drug
employment 312
The Homoeopathic law of nature and a provisional
explanation of it 314
Instances of Hahnemann's observation in support
of the Homoeopathic mode of drug employment 318
The Homoeopathic and Allopathic methods of treatment 320
The Antipathic method of treatment 320
The reason of the injurious nature of the Antipathic and of the sole efficacy of the Homoeopathic employment of medicine ..... 320
The curative mode of drug employment ..... 324
7. **The Practical Part of Organon** ..... **325**
The three points necessary for curing ..... 325
General survey of diseases-acute, chronic ..... 325
Hahnemann's attitude towards nosology *(i.e., classification and naming of diseases)* ..... 326
Hahnemann's coception of miasms ..... 331
Clinical classification of disease (according to Hahnemann). 336

*The practical part, Sec. 71-291*
Diseases-acute and chronic ..... 338
The real significance of acute and chronic diseases ..... 339
The clinical varieties of acute diseases ..... 343
Pathological considerations ..... 344
Hahnemann's theory of chronic diseases ..... 346
Psora ..... 349
Psora and chronic misasm ..... 350
Criticism about the nature of psora-an infection or a dyscrasia? ..... 351
Hahnemann's self-contradiction ..... 352
Psoric miasm-its denotation ..... 354
Psoric miasm and tubercular bacilli ..... 357
Psora and local infection ..... 357
Psoric miasm and non-lactose fermenting intestinal organisms of the coli-typhoid group ..... 358
The identification of psoric miasm-a suggestion ..... 360
Hahnemann's theory of chronic diseases and allergy ..... 363
Hahnemann's theory of chronic diseases and bacteriology ..... 361
A critical estimate of Hahnemann's psora theory ..... 364
The symptoms and characteristic of the three chronic miasmatic maladies ..... 369
Drug diseases ..... 371
Disease inappropriately named chronic ..... 372
CONTENTS

Caution in the treatment of chronic diseases ...... 372
The individualising examination of a case of disease.... 373
Instruction to the physician for investigating and
  tracing the picture of the disease ...... 374
How to perceive the true picture of a disease ? .......... 375
An outline of case taking ...... 376
Differentiating points in the investigation of acute,
  epidemic, sporadic, miasmatic and chronic diseases .... 378
A note on the totality of symptoms ...... 380
The knowledge of the instrument adapted for the cure of the
  natural diseases-the pathogenetic powers of medicines ... 385
The functions of the practitioners of medicine have to
  perform ...... 386
The primary and secondary action of drugs ...... 388
A note on the action of drugs ...... 390
The ascertainment of doses of medicines for proving
  experiments ...... 391
Methods of preparation of drugs for proving experiments ... 391
Precautionary measures to be taken during proving
  experiments ...... 392
How to conduct drug-proving ? ...... 393
When a medicine can be considered to have been
  thoroughly proved ...... 394
Relative merits of employing large and moderate
  doses of medicine in proving ...... 394
The methods of conducting a drug-proving ...... 395
Advantages of such provings ...... 395
Building up of the Meteria Medica Pura or the real
  materia medica ...... 396
The most suitable method of employing medicines for the
  cure of natural diseases ...... 398
The modus operandii in Homoeopathic cures ...... 398
Indisposition ...... 399
Acute diseases ...... 399
Homoeopathic aggravation of diseases ...... 404

Hahnemann's Organon of Medicine

720 pages, pb
publication 2011

More books on homeopathy, alternative medicine and a healthy life www.narayana-verlag.com
In 1810 the greatest work - “The Organon of Medicine” was published. Arnold of Dresden published the first edition, which ran into 5 vols during Hahn’s life. It was translated into 11 languages all over the world. Mahendra Singh comments that Hahnemann’s quotation here of Sydenham was incomplete & incorrect. Rheumatism, jaundice. To render ourselves intelligible in few words, as there are certainly no disease of these and similar names of fixed unvarying character, whose affection it is his duty carefully to investigate, not according to the similarity of the name of a single one of their symptoms. Hahnemann’s Organon Of Medicine Preface Contents Introduction. Web Version Copyright © 1997 Homeopathy Home 5th Edition translated by Dudgeon 6th Edition translated by Boericke Click here to break out of other sites' frames and view full screen. What is curative in medicines to what he has discovered to be undoubtedly morbid in the patient, so that the recovery must ensue - to adapt it, as well in respect to the suitability of the medicine most appropriate according to its mode of action to the case before him (choice of the remedy, the medicine indicated), as also in respect to.
