4. OPEC at the crossroads. Ahead of its upcoming Ministerial Meeting on June 22nd, OPEC is facing some hard choices. The question is not only whether or not to increase its oil production, but also by how much to increase production and whether to do it in a gradual manner or not. Figure 9 shows that our reference forecast projects that the oil price gains momentum in the second-half of 2018, averaging at $80/b, and sustaining that momentum well into 2019. In 2018, the average annual Brent price is expected to increase to $75/b or 35% higher than 2017, followed by a further annual increase of about $4/b in 2019 ($79/b) and ending the year at $81/b.

OPEC: OPEC, in full Organization of the Petroleum Exporting Countries, multinational organization that was established to coordinate the petroleum policies of its members and to provide member states with technical and economic aid. Learn more about the history, membership, and functions of OPEC. Get unlimited access to all of Britannica’s trusted content. Start Your Free Trial Today.

Because OPEC has been beset by numerous conflicts throughout its history, some experts have concluded that it is not a cartel or at least not an effective one and that it has little, if any, influence over the amount of oil produced or its price. Other experts believe that OPEC is an effective cartel, though it has not been equally effective at all times. Organization of Petroleum Exporting Countries (OPEC): is a permanent intergovernmental organization. It was created at the Baghdad Conference that was held on September 10th to the 14th of 1960. Five countries were in agreement; Iran, Iraq, Kuwait, Saudi Arabia, and Venezuela. The goal of this organization was to coordinate and unify petroleum policies among the member countries; they wanted to secure fair and stable prices for their petroleum producers.
