Nursing theory is the term given to the body of knowledge that is used to support nursing practice. A nursing theory is a set of concepts, definitions, relationships, and assumptions or propositions derived from nursing models or from other disciplines and project a purposive, systematic view of phenomena by designing specific inter-relationships among concepts for the purposes of describing, explaining, predicting, and /or prescribing. Each discipline has a unique focus for knowledge development that directs its inquiry and distinguishes it from other fields of study. (Smith & Liehr, 2008).
