Street-level drug markets have traditionally been understood as operating predominantly at a local level, and there has been an absence of contemporary research that has challenged accepted thinking around their shape and organization. This article aims to outline an important development in the retail drug supply landscape, analysing a fast evolving and expanding drug supply model that involves 'outreach' selling from major supply hubs, direct to heroin/crack users in provincial satellite areas. Drawing on a mixed method approach analysing heroin/crack markets in six English locales, we explo
