Learn Geography Online Geography is a very multidisciplinary subject that can in a way mean anything regarding people, places, spaces, nature, time and their interrelations. Since the advent of the internet it is possible to learn geography online with websites like this one. There are two main areas of study in geography. One is physical and deals with the earth (or other earths) and its main features: The lithosphere, the hydrosphere, the biosphere and the atmosphere. The Earth System is seen, in this book, as the highest level unit containing connected sub-systems and components at all scales, with levels of organisation beyond individual building blocks. Given the complexity of this system, it will not be possible to anticipate all the pressures, interactions and feedbacks between the different components. Institute of Physical Geography, University of Frankfurt, Germany. Friis, C. and Reenberg, A. (2010). Land grab in Africa: emerging land system drivers in a teleconnected world. GLP Report: 1.
